How many MW is a distributed PV project in China?

"Around two-thirds of the distributed PV capacity in China is utilized by the commercial and industrial sectors and these projects can vary from tens to more than 100 MW." GCL says that one of its subsidiaries, Henan GCL Energy Technology, has signed an investment agreement with the municipal government of Luohe, Henan province.

Should you invest in the ChiNext index?

Exposure to the index is possible by investing in an exchange traded fund (ETF) or actively-managed fund that uses the ChiNext Index as its benchmark. The ChiNext Index has fallen by 31.1% year-to-date along with other growth indices but is expected to recover once the threat of a global recession recedes.

Will China's solar PV capacity double in 2026?

It expects China's installed solar PV capacity to double over the next three years, from 500 GW in 2023 to 1,000 GW by the end of 2026. Yicong Zhu, senior renewables analyst at Rystad, attributes this anticipated growth to a "significant boost in large-scale projects" under a national program that was launched in June 2021.

How much money will China invest in solar power in 2023?

The company cites data from China's National Energy Administration as showing CNY 134.9 billion (\$15.8 billion) of investment in domestic PV construction in the first half of 2023 - the highest among all power generation sources. The Norwegian market research company also predicts 165 GW of potential installations in 2024 and 170 GW in 2025.
