What are the different types of solar power plants?

Depending on its operating system, there are two main types of solar plants: solar thermal power plants and solar photovoltaic plants. Although both solar thermal plants and photovoltaic power plants use solar energy to produce electricity, the process to generate it is different in each case.

What is solar power?

The Editors of Encyclopaedia Britannica This article was most recently revised and updated by Melissa Petruzzello. Solar power is a form of energy conversion in which sunlight is used to generate electricity.

What is a solar thermal power plant?

A solar thermal plant is a facility designed for converting solar energy into electricity through a conventional thermodynamic cycle. However, unlike thermal power plants that work by using fossil fuels, solar thermal power plants use a completely eco-friendly energy source like sunlight.

What is a photovoltaic power plant?

Photovoltaics (PV) were initially solely used as a source of electricity for small and medium-sized applications, from the calculator powered by a single solar cell to remote homes powered by an off-grid rooftop PV system. Commercial concentrated solar power plants were first developed in the 1980s.

How do solar power plants work?

Solar power plants use one of two technologies: Photovoltaic (PV) systems use solar panels, either on rooftops or in ground-mounted solar farms, converting sunlight directly into electric power.

What is a solar power plant?

A solar power plant is a facility that converts solar radiation, made up of light, heat, and ultraviolet radiation, into electricity suitable to be supplied to homes and industries.

The longest-operating solar thermal plant in the world, the Solar Energy Generating Systems (SEGS) in the Mojave Desert, California, is one of these power plants. The first plant, SEGS 1, ...
