What is a solar panel?

The Editors of Encyclopaedia Britannica This article was most recently revised and updated by Erik Gregersen. Solar panel, a component of a photovoltaic system that is made out of a series of photovoltaic cells arranged to generate electricity using sunlight.

How does a solar panel work?

A photovoltaic (PV) panel, commonly called a solar panel, contains PV cells that absorb the sun's light and convert solar energy into electricity. These cells, made of a semiconductor that transmits energy (such as silicon), are strung together to create a module. A typical rooftop solar panel has 30 modules.

What are the components of a solar panel?

The main component of a solar panel is a solar cell, which converts the Sun's energy to usable electrical energy. The most common form of solar panels involve crystalline silicon-type solar cells. These solar cells are formed using layers of elemental silicon and elements such as phosphorus and boron.

What is a solar panel made of?

A solar panel, consisting of many photovoltaic cells. A solar panel, or solar module, is one component of a photovoltaic system. They are constructed out of a series of photovoltaic cells arranged into a panel. They come in a variety of rectangular shapes and are installed in combination to generate electricity.

How does a photovoltaic system produce electricity?

A photovoltaic (PV) panel, commonly called a solar panel, contains PV cells that absorb the sun's light and convert solar energy into electricity. These cells, made of a semiconductor that transmits energy (such as silicon), are strung together to create a module.
