

Typical wind turbine power curves have several key features: a cut-in point (i.e., wind turbines generate no power below a certain wind speed, modeled at $\sim 3 \text{ m s}^{-1}$); a rated ...

In addition, the Weibull distribution has also been applied to the estimation of the performance of the automatic wind power generation system (Celik, 2006), the simulation and prediction of the wind speed time series (Kaplan and Temiz, ...

Wind Power plays a major role in both large utility grids and small microgrids due to a wide range of socio-economic benefits. Due to this reason, current research has an emerging trend to ...

Wind power generation and wind speed
