

# Wind power generation value-added tax is levied and refunded immediately

Is EGL a windfall tax for non-fossil fuel electricity generators?

EGL was introduced in 2022 as a windfall tax for non-fossil fuel electricity generators to tax 'extraordinary' returns. On the day of the Autumn Statement, an exemption was announced for generation receipts from new investments in electricity generation where the 'substantive decision to proceed' (i.e. FID) is reached after 22 November 2023.

Does the tax levy apply to renewable generators?

The Levy will apply to nuclear and renewable generators, excluding those with CfD contracts. It does not apply to fossil fuel generators or to electricity storage. 'Renewable' includes biomass generators - our assumption is that this would include energy-from-waste, although this is not explicitly mentioned.

What is the windfall tax?

The windfall tax will be expanded to electricity generators with a levy of 45% being applied from Jan. 1 to revenues the government deems 'extraordinary', from low carbon power generators such as wind and nuclear. The two measures are expected to raise around 14 billion pounds for the 2023/24 fiscal year, a treasury document showed.

What is a 'windfall tax' on low-carbon generators?

RWE UK country chair Tom Glover said the measure was a "de facto windfall tax" on low-carbon generators that, if not designed and implemented correctly, could have severe negative consequences for investment in the renewable and wider energy market".

Will wind farms face a new windfall tax?

Wind farms will face a new windfall tax, the chancellor said on Thursday. (Anna Gowthorpe/PA) (PA Archive) Chancellor Jeremy Hunt has announced the windfall tax on oil and gas giants will increase from 25 per cent to 35 per cent and extend the tax to 2028, having faced pressure to increase the Energy Profits Levy, as it is known.

What is the new 45% electricity generator tax?

A new, temporary 45% Electricity Generator Levy will take effect on power generators returns from 1 January 2023. For the purposes of the tax, extraordinary returns will be defined as the aggregate revenue that generators make in a period from in-scope generation at an average output price above £75/MWh.
