

What is sunny places?

Sunny Places is a solar network for residential PV system owners. It provides quick access to the most important data on your own PV system, makes available information on other systems and users and allows active exchange with the Solar Community. Yield data can be easily monitored and compared with the data of other PV systems.

What's new in the sunny places online portal?

The Sunny Places online portal now offers a number of new features. For example, those who are interested and don't have their own photovoltaic system can learn in simple steps how to simulate a PV system as well as compare and estimate its energy yield data. Should questions arise, the Community is ready to help.

How does sunny places work?

The Sunny Places search function lets you find, filter and sort PV systems according to individual features, such as the system name, location or size. Sunny Places makes it easy for you to select other systems and compare them with yours. The display of the specific yield even lets you compare PV systems of various sizes for a selected time frame.

What's new in sunny places?

by Peter Menzel (guest post), 9. Feb. 2015, 2 Comments The Sunny Places online portal now offers a number of new features. For example, those who are interested and don't have their own photovoltaic system can learn in simple steps how to simulate a PV system as well as compare and estimate its energy yield data.
