Page 15: Apsystems Microinverter System Operating Instructions Once AC power is applied, about 0.1A current and 25VA(W) power for each microinverter may be measured with a meter. This Current and Power are Reactive. The inverters ARE NOT operating. After an over 60s waiting time, the inverters will start operation.

Yc 1-5: a stupid metric that makes up power gaps that don't exist. Yc: Yonko commander level. Created before we saw the strength of all yonko commanders, so basically just take it as people on the level of strength of Kaido and BM's top 3 commanders. Yc+: people noticeably a level above YC, but still not close to admirals and Yonko
